

EU End-of-Life Vehicle (ELV) Declaration

August 2022

In 2000 the European Union (EU) passed Directive 2000/53/EC, more commonly known as the End of Life Vehicles (ELV) Directive, to minimize the large amount of waste created by dismantling and recycling vehicles. Since its inception, the regulation has undergone a number of changes and recently, the European Commission opened public consultation to further amend the directive.

What Is the ELV Directive?

The ELV Directive addresses vehicle waste in two major ways: by restricting the use of certain hazardous substances and by setting minimum thresholds for vehicle recyclability, reusability and recoverability. The following substances are restricted in vehicle manufacturing:

- Lead.
- Mercury.
- Cadmium.
- Hexavalent chromium.

We herewith declare that we do not accept any use of Lead Mercury, Cadmium and Hexavalent chromium in our products and therefore comply with the ELV Directive.
